

# *Premium Lens Surgery*

---

Welcome to our practice! We strive to deliver you the best possible care in a warm and friendly environment. We offer *Premium Lens Surgery* to provide you with the opportunity for enhanced quality of life through clearer vision.

Standard Cataract Surgery requires the use of glasses after surgery for nearly everything. *Premium Lens Surgery* is an upgrade option available to you to reduce your need for glasses after surgery.

If you are over 50 and considering LASIK, Refractive Lens Exchange with *Premium Lens Surgery* may be better for you than LASIK by providing far AND near vision. And, you would never need cataract surgery in the future!

In making an informed choice, you should understand some of the “pros and cons” of *Premium Lens Surgery*. For more details, please ask us for the “Consent” document.

- 95+% of patients who choose *Premium Lens Surgery* never or seldom wear glasses afterwards. Although you may not need glasses for your usual daily activities, you may still need glasses for certain activities like reading very fine print, computer work, or night driving.
- *Premium Lens Surgery* is a process. It may take several weeks to adapt to your new vision without glasses. You may desire touch-up procedures (YAG laser capsulotomy, LASIK) three months or more after the first surgery to fine-tune the vision.
- *Premium Lens Surgery* works even if you only need one eye corrected. Patients who need both eyes done tend to see even better after the second eye has undergone a similar procedure.
- We use the latest technologies including Micro-Coaxial Torsional Phaco, Crystalens, ReSTOR, Tecnis Multifocal and Toric intraocular lens implants.
- Insurance plans do not cover the additional cost of *Premium Lens Surgery*.
- Please ask us about our fees and financing!

Find out if you are a candidate for this exciting option at your consultation with us.

Thank you for choosing us for your vision care!
